

What are Greenhouse Poly Bench Tops?

Looking for a long-lasting solution for a messy greenhouse? Try JigglyGreenhouse Bench Top Panels. Designed for wood or metal frame tables, the panels can be easily pieced together and retrofitted to your greenhouse layout. Made of polypropylene and crafted with a woven pattern, these bench top panels are long lasting, durable, and provide the benefits of aeration as well as easy clean up. Water and soil would destroy a metal or wood bench top. Our bench top panels allow debris to fall through, allowing you to quickly and easily sweep or hose off the floors, rather than having to move plants and wipe down each table.

Great for Residential Greenhouses

Bench top panels are great for residential greenhouses, because they are quick and simple to install. The pieces lock together, and the polypropylene material can easily be cut to fit your table dimensions if needed. Polypropylene bench top panels are also more budget friendly. No need to replace wood rot or rusted metal tables. These panels can withstand extreme heat and cold, making them great for year-round gardening.

Convenient for Commercial Greenhouses

Polypropylene bench top panels have all the same benefits for commercial greenhouses! For large scale greenhouses, these panels offer long-term use at a great price. Looking to retrofit several bench tops? Our bench top panels quickly snap together and can easily be cut to the dimensions of your existing tables. Spend more time growing and less time on maintenance and cleanup.
